THE CURE

Norton Internet Security Software

Prevents many viruses and Trojans from installing Scans e-mails and files for viruses and Trojans
Removes many viruses and Trojans
Blocks annoying pop-up ads
Firewall protects you from hacker accessing your machine
Provides parental controls

SpySweeper Software

Actively protects as you surf
Scans your system for adware/spyware
Quarantines or deletes adware/spyware
Prevents future attacks
Use a reputable internet security program

Additional Measures to Take:

Keep your application and operating system updated with the most current Microsoft software "Patches". Do not open attachments in your e-mail programs from people you do not know or from people you do know if you are not expecting something from them. Do not visit web sites that are not reputable. Do not use the unsubscribed feature in advertising e-mails.

The Reality

"A recent study by EarthLink and Webroot companies found an average of 26.5 spyware and adware traces per SypAudit scan."

Viruses won't go away anytime soon; More than 60,000 have been identified, and 400 new ones are created every month", according to the International Computer Security Association (ICSA). "With numbers like this, it's safe to say that most organizations will regularly encounter virus outbreaks. No one who uses computers is immune to viruses." Trend Micro.
